

SATVA reference card v1

Print at 100% scale (actual size) on matte paper. Do not 'fit to page'.
Turn colour management off, or set 'printer manages colour' with no profile.

Taking a reading

1. Lay the card flat and place the reacted strip inside the dashed window.
2. Photograph the whole card, square on, from about 20 cm.
3. Use even light. Avoid direct sun, deep shade, and shadows across the card.

If the photo is not good enough to measure accurately, SATVA will say so and ask you to retake it. It will not report an unreliable number.

Two cards per sheet — keep the second clean as a spare. A stained card is a refused reading.
